

Automatic Car Parking Detector

- *Computer Vision(Surveillance)*

Objective

In Urban areas Car parking is a big issue for public places. Due to the shortage of parking space , high traffic visitors face parking issues everyday.

To reduce these problems build an automatic desktop app for your vehicle which will predict whether the nearby place is suitable for parking or not.

Benefits :

1. To detect whether the nearby place is suitable for parking your vehicle or not.
2. If it is not give an sign for not parking and if it is suitable give an sign for parking.

Model Selection :

Machine learning methods of recent are being used to successfully detect and tell where is parking empty.

Thank
you
